

# A great selection of refrigerants

Darment has a wide range of refrigerants. We ensure the quality of refrigerants and examine all the batches of refrigerants that we receive.

## Over 50 refrigerants are available immediately

Darment has a wide range of refrigerants in stock and immediately available. Refrigerants can be bought in rental or sales cylinders, or you can use your own cylinder. We advise our customers in choosing a refrigerant.

## All refrigerants are tested

We ensure the quality of refrigerants and examine all the batches of refrigerants that we receive. We test the balance of those components that are important for the purity and functionality of the refrigerant. Darment's customers can be sure of the quality and proper functioning of the refrigerant.

Darment's laboratory tests all incoming refrigerants.

## What kind of refrigerant circulates in the equipment?

The correct operation, efficiency and lifespan of the refrigeration equipment depend on the properties and purity of the refrigerant. Even small changes have an impact and can be the cause of errors or difficulty in adjusting the temperature. Acids and other impurities can also damage the equipment. If you are unsure about the quality of the refrigerant you are using, we can analyse the refrigerant circulating in your equipment.

## Inexpensively and quickly, including online

The fastest way to order refrigerants is from our online store. Most refrigerants can be delivered immediately. If you have questions or you need guidance on replacing refrigerants with new ones, or example, please do not hesitate to contact us.

Over 6,000 products for refrigeration professionals

# Everything for refrigeration

High-quality parts and reliable installation work ensure a good refrigeration plant. Darment offers high-quality components for the construction and maintenance of a refrigeration plant as well as professional tools for its correct and safe installation. Our experts offer support and advice on the design of the plant and its solutions.

## High-quality compressors

For in-store chilling cabinets, air conditioning, cargo space and industrial refrigeration machinery and process water cooling.

## Energy-efficient condensing units

Hermetic condensing units, semi-sealed units and ready-made refrigeration and freezing units.

## Air conditioning and split accessories

All indoor and outdoor accessories for air conditioning and split systems: portable air conditioners, installation trunking and accessories, drain pipes and pumps, and brackets.

## Reliable heat exchangers and spare parts

Static evaporators, evaporators, air coolers, condensers, liquid coolers, plate heat exchangers, suction line heat exchangers and subcooling heat exchangers.

## All piping components

Dryers and filter-driers, sight glasses, valves, check valves, suction filters, oil separators, oil dosing systems, oil reservoirs, suction line accumulators, vibration eliminators, solenoid valves, expansion valves and orifices, silencers, pressure regulators, receivers, safety valves, Rotalock valves and other piping components.

## Automation and electronic parts

Thermostats, pressure switches, water valves, flow switches, electronic controllers, speed controllers, heating resistors and tail wires, time switchers and contactors.

## Tools for reliable installation

For vacuuming, refrigerant transfer and recovery, leak detection, measurement, and pipe machining and connection.

## Refrigeration oils

Vacuum pump oils and refrigeration oils for all refrigerants.

## Durable fans

Small shaded-pole and ECM fans, ring blowers, cross flow blowers, net and external rotor fans.

## Copper pipes for every need

Copper pipes for the distribution of hot and cold water, oil and gas pipes, cooling hoses, sprinklers, steam and solar panel systems.

## Efficient refrigeration insulations

Insulation sheets, insulated pipe supports and insulation tubes and panels.

## A wide selection of capillary parts

Plenty of capillary parts are available in a wide variety of sizes and designs in copper and plastic, millimetre and inch sizes.

## Lots of installation accessories

Threaded connectors, needle valves, tapes, adhesives and tube brackets.
